

## Why Handy Backup Network Server?

- Handy Backup Network Server is a data backup software solution oriented toward small/medium businesses and departments of big enterprises (up to 70 users), as it provides means of handling massive backup and restore tasks from a central one-man controlled management console.
- The basic Handy Backup Network Server edition includes functionality for backup and restore of MS Exchange, Lotus Notes/Domino, MySQL, MS SQL, Oracle, DB2, ODBC-compatible databases, and other popular platforms and data types.
- Handy Backup is a platform: users can create their own add-ons for backup of data and settings of specific applications.
